### THE DISCIPLINE:

Nutritional Science is the study of the effects of food components on the metabolism, health, performance, and disease resistance of humans. It also includes the study of human behaviors related to food choices.

### COURSE WORK:

Courses required for the undergraduate major in nutritional science are divided into three general areas: core courses, elective courses, and supporting courses. Core courses provide a foundation in nutritional science. Elective courses (two categories of elective courses) allow students to select a more directed and specific training in nutritional science. Supporting courses include anatomy, physiology, chemistry, biochemistry, statistics, and chemistry, biochemistry, physics, statistics, and molecular biology.

### FINANCING:

Some assistantships and scholarships are offered through the Department of Nutrition, Dietetics, and Food Science. There are also college, university, private, and federal sources for financial help.

### CAREERS:

Graduates with a B.S. in Nutritional Science find employment in major research centers; biotechnology, pharmaceutical, and nutraceutical industries; community nutrition programs; nongovernmental organizations; and the fitness industry.

Other jobs are available with food security advocacy groups (e.g., food banks, anti-poverty organizations), health advocacy organizations (preventing osteoporosis, cancer, or heart disease), trade groups for commodities (citrus fruits, vegetable growers), and people working to increase food security (farmers’ market organizers, Supplemental Nutrition Assistance Programs [formerly called food stamps] as educators or administrators). Specialized skills or training such as laboratory research experience, bilingual proficiency, journalism courses and experience, or service learning with local, national, or international community organizations make students more competitive for these jobs.

Many graduates with a BS in Nutritional Science have gone on to obtain a graduate degree (e.g. MS, MPH, PhD) at institutions such as BYU, Stanford University, the University of Illinois, the University of Utah, Utah State University, and University of Rome Tor Vergata. In addition, Nutritional Science graduates have attended medical schools at Duke, Baylor, and the Mayo Clinic (among many others), dental schools at Ohio State, University of Pittsburgh, and University of the Pacific, as well as schools of osteopathy, pharmacy, podiatry, optometry, physical therapy, and accredited physician assistant programs.

Most nutrition counseling services are provided by Registered Dietitians. Students interested in a career as a nutrition counselor should consider majoring in Dietetics.
PRACTICAL EXPERIENCE:

Students may participate in research under a professor’s direction. Interested students should familiarize themselves with the professor’s research interests and ongoing projects. Students should approach the professor whose work most interests them to discuss how they can become involved. Students may participate as a paid research assistant for academic credit (NDFS 494R - Undergraduate Research or NDFS 399R - Academic Internship). Some students who have taken advantage of this opportunity have presented the results of their research at regional, national, and international scientific meetings and have published their results in peer-reviewed scientific journals.
