Completion of an internship in the summer term between the junior and senior years is strongly recommended.

### Requirement 7: Internship Requirement

- Completion of an internship in the summer term between the junior and senior years is strongly recommended.

### Requirement 8: GRE Subject Test

- Students are required to take either the GRE Mathematics Subject Test or the Mathematics Major Field Test the last semester before they graduate. The results of these tests do not appear on the transcript or affect the GPA. For more information contact the math department.

### THE DISCIPLINE:

Mathematics is a means of dealing with order, pattern, and number as seen in the world around us. The abilities to compute, to think logically, and to take a reasoned approach to solving problems are highly valued in society and are characteristics of any educated person. Mathematics is not just a body of knowledge, but a process of analysis, reasoning, comparison, deduction, generalization, and problem solving. A mathematician's stock in trade is the ability to solve problems and explain the solutions to others. Having once identified what has been solved and why the solution is valid, the problem solver explains the solution in the context in which the problems arose. The concentration provides them with contextual knowledge which will enable them to identify interesting problems and to implement their results.

### CAREER OPPORTUNITIES:

Majors in mathematics (BS) prepare for a wide variety of careers. Some enter graduate school or professional schools and prepare for careers in such fields as college teaching, consulting, research and development, law, medicine, and business administration. Others take positions in government agencies, industrial laboratories, information management firms, or business organizations. All of them spend much time communicating with colleagues about the problems they are solving as they continue to learn more mathematics and share mathematical ideas with others.
