**Note:** Students are encouraged to complete an average of 15 credit hours each semester or 30 credit hours each year, which could include spring and/or summer terms. Taking fewer credits substantially increases the cost and the number of semesters to graduate.

SENIOR THESIS:
Complete a senior thesis, including the following:
A. Choose a research mentor and group as early as possible, starting
with information in Phscs 191 and 291, and discussion with faculty, your
advisor and senior thesis coordinator. It is best to start as a freshman or
sophomore. Interdisciplinary work in other departments or in
internships is possible.
OPTION 4.1 Complete 2.0 hours from the following course(s)
B. PHSCS 498R - Senior Thesis 3.0v
You may take up to 2 credit hours.

REQUIREMENT 5
Students are required to take the Physics "Major Field Test" the last semester
before they graduate. The test is a standardized assessment of
undergraduate physics written by ETS (Educational Testing Service). The ETS
website contains a description of the exam and sample problems:
http://www.ets.org/mft/about/content/physics. Results of the exam do not
appear on the transcript or affect the GPA. Students should contact the
Physics undergraduate secretary to make arrangements for taking the exam;
typically it's done in the Testing Center before final exams begin.
Note 1: Students planning careers in experimental, applied, or industrial
physics should complete Stat 201.
Note 2: All students will benefit, through courses or individual study, by
learning programming skills and numerical methods beyond what you are
taught in C S 142 and our computational physics courses. Consider the
following: C S courses, Math 410, Me En 373.
Note 3: Students planning graduate school in physics are recommended to
complete the following:
MATH 302, Phscs 601, 602.

THE DISCIPLINE:
Over the centuries physicists and astronomers have studied the
fundamental principles that govern the structure and dynamics
of matter and energy in the physical world, from subatomic
particles to the cosmos. Physicists also apply this
understanding to the development of new technologies. For
examples, physicists invented the first lasers and
semiconductor electronic devices.

Physics and astronomy students learn to approach complex
problems in science and technology from a broad background
in mechanics, electricity and magnetism, statistical and
thermal physics, quantum mechanics, relativity, and optics.
The tools they develop at BYU

include problem solving by mathematical and computational
modeling, as well as experimental discovery and analysis. All
students gain professional experience in a research, capstone,
or internship project, usually in close association with faculty.
Together these experience can provide excellent preparation
for employment for future studies in physics, other
sciences, engineering, medicine, law, or business.

Most physicists and astronomers work in research and
development in industrial, government, or university labs to
solve new problems in technology and science. They also share
the beauty discovered in our physical universe by teaching in
high schools, colleges, and universities.

CAREER OPPORTUNITIES:
A degree in physics or physics-astronomy can provide:
1. Preparation for those who intend to enter industrial or
governmental service as engineers, technicians, physicists, or
astronomers.
2. Education for those who intend to pursue graduate work in
physics or astronomy.
3. Education in the subject matter of physics for prospective
teachers of the physical sciences.
4. Undergraduate education for those who will pursue graduate
work in the professions: business (e.g., an MBA), law (especially
patent law), medicine, etc.
5. Fundamental background for other physical sciences and
engineering, in preparation for graduate study in these fields.
6. Physics fundamentals required by the biological science,
medical, dental, nursing, and related programs.
